PROTOCOLS

## Antioxidant and Revitalizing Protocol

- Enzyme Podwer
- Vitamin Face Mask
- Serum Vitamin C cure
- Antioxidant Goji
- Illuminating Orange

For use in **combination with revitalizing serotherapy**

## Renewable Energy Protocol

- Enzyme Powder
- Snow Face Mask
- Serum Vitamin C cure
- Chi Energy Infused

## Bactericidal Acne Therapy Protocol

- Enzyme Powder 113
- Sulfur Face Mask
- Serum ALA cure
- Spot Diminishing ALA

## Detoxifying and Seboregulating Protocol

- Enzyme Powder 113
- Vitamin Face Mask
- Serum o2 cure
- Super Greens Strength
- Purifying Activated Charcoal

## Post Acne - Bacteriostatic Protocol

- Enzyme Powder
- Vitamin Face Mask
- Serum o2 cure
- Puere Himalayan White Tea

## Post Acne Scar Protocol

- Enzyme Powder
- Snow Face Mask
- Serum Nano cure (factores de crecimiento)
- Renewal Boost

## Brightening & Shining Roses Protocol

- Enzyme Powder
- G-Enzyme Powder
- Rose Face Mask
- Serum Vitamin C cure
- Egyptian Rose

## Hyper Hydration Protocol

- Enzyme Powder
- Rose Face Mask
- Serum Hyaluronic Acid cure
- Hyaluronic Acid

### Intensive Post-treatment Protocol (Soothing)

- Enzyme Powder
- Serum Peptide cure
- Intensive Afetercare
- Blue Glacier Cryo

### Photodynamic Therapy Protocol

- Enzyme Powder
- Snow Face Mask
- Serum Hyaluronic Acid cure
- Led Ligh See Through

## Facial Rejuvenation Protocol

- Enzyme Powder
- Contouring Face Mask
- Serum Peptide cure
- Skin Warrior Ageless

## Post-hyperchromia treatment protocol

- Enzyme Powder
- Vitamin Face Mask
- Serum Vitamin C cure
- Discoloration Alpha Albutin

Suitable for sensitive skin

# Acne protocol

## Photodynamic therapy (PDT) + 5-aminolevulinic acid (ALA)

PDT is an excellent therapeutic alternative for the treatment of moderate to severe inflammatory acne, involving the use of a photosensitizer (ALA) that is activated on the affected tissue when exposed to light at a certain wavelength, producing a photodynamic reaction, oxidative damage and selective destruction of the cells that fix this product.

Aminolevulinic acid belongs to a class of drugs called photosensitizing agents. When aminolevulinic acid is activated by light, it damages the cells of actinic keratosis lesions.

Propionibacterium acnes (P. acnes) is the most prevalent microorganism in the skin and follicles of areas rich in sebaceous glands. This bacterium produces endogenous porphyrins

and photoactivation with blue-ultraviolet LED light at an intensity of 415 nm leads to the formation of cytotoxic oxygen which ultimately leads to the disruption of the normal function of the bacterial cell wall and subsequent death of the microorganism.
